

Presentation of Various Unity Theories

Before Preliminary Rough Draft

Brief Intro to Unity Theory for Societal Transformation:

If you have not read the paper on the Integrated Comprehensive Unity Theory for Societal Transformation, we recommend you doing that first by clicking here: <http://www.unitytheory.net/UnityTheoryIntroPresentation.pdf>

In a quick summation, our Unity Theory is that it may be impossible to implement substantial tangible change using the current model of fragmented single-focus social movements across the world, and therefore it may only be possible to solve any one of the global crises through unification of “ALL” the people and social movements.

The application of Unity Theory brings up substantial complications in how you create a realistic attempt at unity between a society of fragmented peoples. The foundation of our Unity Theory must consider how we as humans fundamentally perceive the world, and allow us to re-create our perspective and world view through conscious paradigm shifts at the individual level. Unity Theory gives the ability to allow multiple parallel systems of life styles that consist of different world views to live side by side without conflict or the need to impose your world view on others. Everyone should have the right not only to practice their own religion, but also to live within their own world view without being targeted or forced into someone else's.

In order to seriously consider your own perception and understanding of reality, as well as your own world view and how you consciously and/or unconsciously push your world view on others, it is essential to take the time to understand the multitude of Unity Theories that exist, and what they tell us about the world.

Introduction to Unity Theory Background:

The Integrated Comprehensive Unity Theory for Societal Transformation is based on extensive scientific, and sudo-scientific bodies of work that have been on-going for centuries. The foundation of all of these theories is to understand a rational world view of reality. When each is looked at in detail the truth is that we know very little about what we are and where we come from, and there is MUCH more to learn to unify our understanding of ourselves and where we are going. The Goal for our Unity Theory for Societal Transformation is to umbrella all other Unity Theories and help transform our society in a way where we can all accept that a variety of world views and “parallel realities” can peacefully co-exist side by side with each other to allow each individual to live to their fullest potential. By unifying, we can accomplish many parallel goals, that may support a minority, but in the end we are all minorities and we simply need a larger number of people to establish workable solutions. Here is a list of the Primary “Branches” of society that we will cover in more detail.

The Integrated Comprehensive Unity Theory for Societal Transformation is directly based off of a much larger conscious and scientific endeavor which also uses the term Unity Theory. People have been working on a “Unified Theory of Everything” for many centuries, and the peoples movements of many nations and across the world have been chanting “The People United, will ...” for many decades and possibly centuries.

There are 3-5 main branches of all Unity theories that are applicable to the foundation of our take on Unity Theory and are important to acknowledge now. These 3-5 branches represent branches of the human cultural tree of knowledge and community. Each individual across the planet can easily be aligned more prominently with one or more of these branches.

- Mainstream Science
- Sudo-Science
- Spirituality
- Religion
- Inspiration
- Social Movements

We are going to start with Mainstream science because it is currently the primary world view of our global society. Even though a minority of individuals personally believe in science over their own religion, a majority of people use technology in their day to day lives, which is based off science, and therefore we as a society are based on science on a fundamental level as our primary world view. Mainstream science took over from religion just a few 100 years ago, and so is quite new in the context of our primary societal world view.

1) Mainstream Scientific Unity Theories

Theory of Everything to bridge General Relativity and Quantum Field Theory:

Prevalent scientists and mainstream scientific research is currently working on a Unifying Theory between General Relativity and Quantum Field Theory. Scientists have been working for many decades to solve the problem of how physics can scientifically explain how the world works at the largest and smallest levels, and we can't seem to do it...yet.

http://en.wikipedia.org/wiki/Theory_of_everything

Double Dark Theory:

Another notable theory that has not been proven yet, but is scientifically recognized as legitimate is the Theory of Dark Matter and Dark Energy, The "Double Dark" Theory, or the Theory of Weakly Interacting Massive Particles (WIMPs).

http://en.wikipedia.org/wiki/Dark_matter

It is Essential to take a moment to go deep into the accepted scientific understanding of the % of existing matter that is applicable to our reality. The basic calculations of the General Relativity clearly show that in order to hold the visible matter of Galaxies together, that there would need to be 95-96% more energy/matter to do so, hence the Dark Energy and Dark Matter. In other words 95% of the known universe is MISSING!

The Theory States that all Matter that we know about in the universe is what is called "Luminous and NonLuminous Matter", **only represents ~4-5% of the known Universe**. The other 95-96% of the Universe is UNDETECTABLE and completely UNKNOWN to science.

But this is not even the Beginning. Of this ~4-5% of "known" matter, ~90% of it is predicted to be the makeup of interstellar space as single atoms of hydrogen and

helium gas which is UNDETECTABLE because it is DARK, aka “nonluminous”. Therefore according to this theory only ~10% of the known universe is even visible from telescopes or any other scientific instrument or sensor, and this visible detectable universe of nebula, stars, and planets only makes up ~0.83% of the scientifically theorized universe.

But event THAT is barely the beginning! An additional 36% of the known Universe are Neutrinos and other sub-atomic detectable particles that do not interact with normal physical matter. They just go right through you, me, and the entire planet Earth. The other 64% of the known Universe is what make up the normal Nebula, Stars, Planets, Astroids and Comets is ONLY 0.5% of the known Universe.

This is where it starts to get CRAZY. Of the 0.5% universe that makes up the physical matter of Stars and Planets, even if we just ignore the Nebula and distant gases, 99.99%+ of this physical observable matter is PLASMA in the forms of Stars and Black Holes!!!!

So if only 0.5% of the Universe is physical observable matter, and 99.9% of that is Plasma, that only leaves 0.005% of all Matter represent our everyday existence of Solids, Liquids, and Gases.

Yet there is Still Two more levels. If we just use our solar system as an example, the GAS Giants make up 99.9% of our Solar System, minus the Sun's Plasma.

So that would mean that rocky planets like the earth only make up 0.1% of our solar system, which would represent just 0.0005% of the Universe.

Yet our entire existence takes place on the surface of our planet, which is just 0.1% of the Earth. We know very little about our deep oceans, and even less as we go further into the earth.

And then last but not least, organic living matter, aka carbon/water based cellular life, only makes up a small fraction of the crust about 99.999% of the Earth's Crust is Organic Life. So we can estimate that **our entire reality of experience takes place in just 0.000005% of the UNIVERSE!!!** In other words we don't know much about the other 99.999995% of the universe from any direct experience, its all based on scientific theories and probability.

Quantum Levels:

Quantum Field Theory of the make up of atoms, basically states that of the 100% of the Universe that makes us up (which is only 0.000005% of the universe), the basic building blocks of mater is basically nothingness. The minute electron doesn't even exist as a single particle, and is instead a wave of probability, and the center of the atom is on average one 84,000th the size of the atom itself, and the 84,000 part is empty space! If we go inside the nucleus and look at the makeup of protons and neutrons, it quickly becomes evident that quarks, leptons, and bosons are still in the process of being understood weather or not they are even physical. We currently have no visual evidence of quarks, but we DO have an actual visual picture of a hydrogen atom. The rings represent the probability of the electron's location, as it can be in any position as a wave, at the same time until we have observed it at which time it can become a particle.

http://en.wikipedia.org/wiki/Elementary_particle

String & M Theory:

We can very quickly get less sure of our simple 3-dimensional existence based on the difficulties as you go Deeper than Quantum Field Theory. String Theory and M Theory state that vibrational particle like “strings” and “membranes” make up the fabric of the universe itself, and are involved in a multi-dimensional framework with as many as 10-15 different dimensions beyond our typical 3 dimensional world with time.

Although none of these theories have been proven or accepted, physicists and scientists in general seem to have agreement that the everyday world that we experience as a physical body is NOT the basis of how the universe exists on the fundamental levels. There is MUCH more than what we perceive around us on a day to day basis, so we aren't even sure if our consciousness even exist within the normal three dimensions that we physically experience.

http://en.wikipedia.org/wiki/String_theory

<http://en.wikipedia.org/wiki/M-theory>

Cognitive Neuroscience:

It is also important to note that there is a lot of medical scientific theories that are accepted by main stream scientists on the concepts of Cognitive Neuroscience, which focus on where and how consciousness operates in the brain. Although they have some understanding on basic mechanical cognition within the brain, no experiments have yet proven to understand consciousness itself in any scientifically acceptable agreement.

http://en.wikipedia.org/wiki/Cognitive_neuroscience

Broader Unity Theory:

Between science and broader Sudo-Science, there is a HUGE body of work that takes mainstream science from The Theory of Everything to the limits of currently accepted scientific understanding. Here is an example of work on that is still related to currently accepted science but pushes the boundaries towards a MUCH larger context of Unity Theory towards areas that are no longer accepted by mainstream science:

<http://UnityTheory.info>

2) Sudo-Scientific Unity Theories

Sudo-Science is simply the application of the Scientific Method to theories and experiments that are not directly provable in the physical natural reality that we exist in. Sudo-Science can also be defined as any application of science that mainstream scientists do not collectively acknowledge as legitimate. It is important to know that this is completely subjective and opinionated and is in no way grounded in science itself, but is important to distinguish because of the substantial fragmentation between Science and Sudo-Science.

Energy Healing

A lot of Sudo-Scientific research has been done in the medical industry on eastern and alternative therapies. For example Acupuncture, although it can not be proven scientifically how it works, it can be proven statistically that it does help people more than the placebo effect. The root understanding of how Acupuncture actually works within the body, and its general connection to all Energy Healing modalities of the Auras, Chakras, and Meridians of the “Energy Body” are grounded in thousands of years of research, data, and documentation, but is NOT scientifically accepted and is instead degraded to a Sudo-Science.

Merger of Western, Eastern, and Alternative Health Care Systems

Green Mental Health Care
Global Health Care

Consciousness and Conscious Field Theory

Endless Studies on the theory of what consciousness is and how it works, and interacts with the Universe have been proposed and studied. This version of Unity Theory proposes a specific scientific theory on how consciousness permeates the universe and gives an alternative proposal to deal with the discrepancies of physical vs energetic matter in the Universe, and therefore substantially changes, but doesn't contradict the Double Dark Theory. You can read more about Conscious Field Theory later on in this paper, but here is a direct link for more information:

<http://www.consciousfieldtheory.com/CFTv2.pdf>

Meditation & Prayer

Many studies have been done on the effects of meditation on an individual, as well as the effects of mediation on a entire community.

http://en.wikipedia.org/wiki/Research_on_meditation

Sill a lot more to mention here. . .

Variety of other Sudo-Science Work very long!!!! between sudo-science and Spirituality.

3) Spiritual Unity Theory

When you start discussion spiritual theories, it is no longer practiced to use the Scientific method, and many people will simply state that their theory is true based simply on experiential or individual understanding. The premiss of spiritual understanding is based on the context of a universal conscious field that anyone can tap into if they align their mental and conscious vibrations, and can literally “download” information from the universe. This is the basis of all types of Yoga, mediation, and many spiritual practices, and the foundational basis is that all Spiritual theories can directly be experienced by any individual if they apply themselves to the conscious experiments.

<http://UnityTheory.org>

OneNess

Individual spiritual practice & mainstream yoga.

Near Death Experiences.

Other deep experimences

Unification of different practices -

4) Religious Unity Theory

The primary difference between spirituality and Religion, is that religion is primarily written down and pre-structured where the individual is told the information and asked to believe it without directly experiencing it themselves.

**Unification between religions
Unity Church & Unitality**

Haven't Finished yet -going to stop here for now.

5. Inspirality

Many get their energy from other inspirational activities, that aren't considered spiritual, but are in the same context.

Music

Art

Learning

6. Social Movements Movement of Movements

Been ongoing work for many many years on what many refer to as the Movement of Movements or Unity Movement, or InterMovement, or one of the many other names to refer to similar concepts. Although a lot of work has been done to help build this larger movement, so far it has been elusive to organizers. Hopefully Unity can change that.

Summary World Views and the Unity World View:

The Integrated Comprehensive Unity Theory is grounded in the idea that it may not be possible to have substantial tangible change to improve the lives of everyday people without a united comprehensive Integrated approach to the evolution of humanity itself.

Unicentific Method

The application of this theory involves a detailed process, akin to the Scientific Method, but which we call the Unicentific Method. Each solution must fit like a mathematical puzzle into every other issue and solution simultaneously. The calculations necessary to have this precision are extensive, and the systems are based on everyday human conscious experience and should be easy to engage in at any age or experience level.

Argument from TCP

Conscious Field Theory Intro

Intro to Unitality

Unicience Method of Experiential Experimentation

Root of theory:

MUST consider ALL data points in real-time to be able to create workable solutions. And understand the interaction and outcome of all those data points in real-time.

At its roots it is a scientific theory

Also introduce new method of ? science, unicience Unicientific

Primary root is that we can conduct experiments and get proven outcomes (or high probabilities) of experiences in real time. Experiential experiments. There is only one single present moment of conscious experienced reality, and therefore it can NEVER be replicated. EVER Does anyone have two experiments that documented an identical experience outcome? Not that I have ever seen, and if someone says so, I still doubt they are considering all the data that could easily have been collected, I mean ALL data, every single possible bit of information about the moment.

Also Anyone should be able to conduct a simple experiment, and then work the levels up to gather more and more data.

Process of the Unificence Method:

Formulation of a Question -

Hypothesis

Prediction & Data calculations

Testing and Outcome Simultaneously

Analysis

Can only formulate a question, hypothesis and prediction based on data gathering and calculations that MUST be conducted instantaneously in real-time. The entire experiment must be designed from start to finish, and when the experiment is conducted, the system must gather ALL data possible from that moment to document the experiential test. In other words the experiment itself must be conductible in real-time, and replicable in real-time. The outcome is Always based on the current conscious moment and all analysis is simply to understand that MOMENT NOT to draw conclusions from it, the conclusion MUST be made simultaneously with the experimental experience itself. The experiment should be able to be conducted in a short amount of time. If something exists it should exist and

be documentable in the present movement to be experienced consciously in that moment. There may be substantial preparation and explanation to get to the correct state or connection especially if multiple people are involved, but the goal would be that the specific hypothesis or prediction would focus on a moment in time. If there are multiple moments needed, then each moment should really be considered an entire separate experiment that is conducted consecutively. The focus is always on Data Recording, and simply reviewing the experience, not re-creating the experience through calculations. All calculations should be done in real time during the experience to be a valid outcome.

An inevitable outcome of this process or method is the ability to gather ENORMOUS amounts of data in a single instant, and then more importantly be able to "crunch" or do MAJOR calculations of that data, all in the present moment. Big teams of Unicentists will be needed to prepare mass amounts of data collectors and number crunching, with HUGE computer processing power, to conduct entire experiments in real-time that with normal scientific systems should take days, weeks or even years. The correlation between a typical scientific experiment, and a Unscientific experiment is simply that there would usually be many many unscientific experiments within a single normal scientific experiment that is conducted using the scientific method.

Another interesting outcome of this process would be to work towards an experiment to be conducted with a simultaneous outcome that needed NO talking or writing for the outcome to be produced. Moments happen too fast for talking and writing. Everything happens faster. A great example is the LHC where all the focus is the exact MOMENT of the atom smash. The only difference would be that whatever data and calculations are collected and computed in that moment would be the ENTIRETY of the outcome of that unscientific experiment. Any post calculations would be in violation and

would not be considered in the context of the original outcomes and only can be considered as analysis of the outcomes and can NEVER reach conclusions. Only the actual present moment can reach achievable conclusions.

Also if our theory is proven, one example of this is that is the MAXIMUM possible data is taken for each and every unience experiment, EVERY SINGLE EXPERIMENT conduct would come out with different data. It would always be different because it is a different moment. If it does look the same within the documentation, it could just be that the Maximum possible data was NOT taken.

This Creates Substantial restrictions the type and focus of the experience. There should be a great effort to design experiments that can be replicated easily by individuals, not HUGE science teams. The goal is to get experiential repetition, and compare statistics, but each MOMENT must Always stand alone.

All current science is 100% based on the Past, unience is based on the present moment experienced and studies realities and experiential consciousness itself, not collective consciousness of natural systems. NO experiment needs to be replicated to prove or disprove the one before. Each experiment Always exists independent of ALL others, and is only compared in terms of the data gathered. The goal would be each time the experiment is conducted new and different data from the present moment is documented.

Introduction:

The foundation of the Unified Integrated Comprehensive Thoery is al already existing "Unity Theory" . . . This is primarily insprality and unitality, not the best way to introduce it???

Apply Unity Theory to Societal Transformation

Unity all peoples and social movements for societal transformation.

This may be the only way to do it.

Any fragmented solution could always have adverse effects on other parts of society.

There may only be one way to stratigicly organize everything to make it all "fit", you can always change it, but any one change will ripple and actively change everything else simultaneously. The entire system is malleable and flexible, yet if you change any one part, there is a ridged connection that perilates the changes through the whole.

Should bring a type of approach. maybe re-write why unity theory.org did, except for society

Argument would be part of this, NOT TCP

Unification, Unity, United:

The Thoery takes the apraooch of a single vision as its goal.

Integration

All the different aspects of the transformation are integrated together.

Comprehensive - you must comprehensive cover all aspects of society

Fragmented Movements Isn't working, lets consider the Unified Theory, but it might not work either, but must be considered.

Updates to the Concious Field Theory:

- flip consciousness inside out to preive it

- New experiment of people perceiving an event, and seeing something completely different.

- Also Add Unity Conciousness Unifed Field, Unity Filed

- Speed of Conciousness, Sun Earth, living bodies.
